

FORMATION OF THE MECHANICAL-PRIVATE PARTNERSHIP MECHANISM AS A NECESSARY CONDITION FOR ENVIRONMENTAL SECURITY IN CONDITIONS OF SUSTAINABLE DEVELOPMENT

Maryna Mashchenko, Doctor of Economics, Associate Professor Simon Kuznets Kharkiv National University of Economics, Ukraine

In today's conditions of sustainable development, it is important to introduce a progressive mechanism of cooperation between state authorities, local self-government bodies, private sector and civil society institutions. For the public-private partnership functioning, a condition is required to strengthen the country's economic security as a complex multifactor category that characterizes the ability of the national economy to expand itself to meet the needs of its own population at a certain level in order to counteract the destabilizing effect of various internal and external factors. Among the negative phenomena and trends which were typical for the past years, particular concern, from the point of national and economic security, continues to cause all known phenomena such as decline in production and deterioration of foreign trade balance, together with preserving its negative balance, further deepening of the payment crisis and the level of "shadowing" of the economy, the growth of the debt level to the budget, the amount of fines, the low volumes of foreign investment, the growth of the internal debt of the state domestic debt, the decline of the living standards, the aggravation of the problem of employment, the increase of the external state debt of Ukraine, etc. Such a situation enhances the real threat to the national security of the country, impedes the advancement of reforms and provokes the growth of social dissatisfaction with the state's policy. Among the reasons that determine the difficult socio-economic situation of the country, experts mostly mention the difficult financial situation of enterprises, the lack of demand for domestic products due to its high price and low quality, the lack of investment, the lack of institutional reforms, imperfect tax legislation, etc. The above factors are only derivatives from the imperfection of solutions taken by various bodies of state power. Unfortunately, the activities of state power are still controversial, focused on the achievement of single goals and insufficient consideration of the practical adaptation of the implemented measures to the real conditions that have developed in Ukraine. That's why; along with the clear solution of certain problems of the macroeconomic order, there is an aggravation of problems of the socio-economic status. Developing the mechanism of public-private partnership to strengthen the environmental security [1] in terms of developing the entrepreneurial activity, isolating the programmatic and strategic directions to develop competitive strategy of the partner innovative institutions of the country. teadmus.org
