відчуття) до одного натискання кнопки «миші» ми тим самим позбавляємо себе більшої частини цього відчуття — відчуття прекрасного [1, с. 93].

Виходячи з основних положень проведеного дослідження, можна зробити висновок з подальшою перспективою на розмірковування та вирішення глобальної проблеми:

Неуцтво небезпечне в усіх своїх проявах. Але з ним буде легше впоратися, використовуючи величезний естетичний потенціал культури, усвідомлюючи те, що людина в змозі розвинути в собі естетичне сприйняття, яке покаже, що вихід з усієї безвиході знаходиться в площині духовного вдосконалення, спрямований до Добра. Це сприяє формуванню громадянина й патріота України.

People throughout history have pondered the purpose of life. Philosophers spin theories. Poets write songs. Young people drop out of society to "find out what it's all about". Older people may remain within the "establishment," but they still wonder [5]. After all, these questions have not yet been bright and there are no answers. During millenniums the great philosophers of many countries said: "Know thyself", — we still do not know what is the essence of human life? What is our role in the world and, of course, what is the purpose of the life, why does human live? We look for help in space, in some unexplained things, myths, not understanding that the main answer on all long-term questions is in us?

Medieval philosophers were divided in their thinking about the meaning of life on two groups: the first is the Bible, according to which man is God's creation, and second, which equates human to a reasonable animal. The famous philosopher Thomas Aquinas partly shared the views of Aristotle, also seeing the meaning of human life is happiness of learning and contemplation of God. The Church played main role, which also leads human to heavenly bliss and closer to God. On an example of philosophers of two various epochs, we observe the effect of penetrating influence of times on sights of thinkers of ancient times. If, at the time of Aristotle's life the world center was human, then in the Middle Ages it completely replaces the Deity.

If talk about the revival, where science is beginning to play a pivotal role in the life of society, it is not surprising to learn that the famous Michel de Montaigne eliminates the immortality of the soul, because it is not supported by any facts. What is the meaning of

human life? Spiritual happiness replaces a more streamlined search for truth, the desire to satisfy the inquisitive mind. "Satisfaction of mind — a sign of his limit or fatigue." The all reasons string to the mind and the endless pursuit of the unknown and is there true happiness and meaning of existence?

We live in a world of sorrow, depression, injustice, violence, cruelty, immorality and where there are imbalances in personal terms, within the family, as well as on social, economic and spiritual levels. A lot of people just suffering, despite of all advanced technologies and ideas. We create the illusion of well-being and prosperity, our inner world and its nature changed and there are no necessary for the survival of the resonance or sync with the planet. We constantly create barriers and walls around our souls. Our harmony with nature is kept to a minimum. And we live or exist.

We have lost a sense of compassion toward other people and all living beings on this planet, and as if our receptors of feelings of love entirely extinct and atrophied. How can you survive in the conditions of life, when routine turns us into cars? How can we understand the true mission and purpose of our lives? How to realize the Mission of our soul? How to find ourselves and determine the true and potential?

To determine our life goals, we need to have an idea about how we have our true origins. Earth is a small laboratory in the entire space of the Universe, which consists of many planets as the same large number of composed and cells in our body. The human body is composed of four elements, where the fifth element is the soul or you are a form of vital energy. Our body consists of billions of micro-organisms, which are on the highest plane of consciousness.

There are billions of galaxies and universes and planets like Earth, where our soul can move. Our mind or hard disk is limited by the ability to measure time and space, and thus we feel separated from the rest of the space.

Space, time, sensual obligations prevented our mind an objective understanding. This happens because our soul tends to move and being in different time-spaces and galaxies to pass us its desires and dreams.

Journey of the soul are faster than light, and it can achieve another of their Habitats in another Universe, in fact, in a few seconds. Thus our soul can travel through time easily without leaving the body.

Thin astral body or soul is able to move around, and our gross body or physical form made from fragile items that only allow the body to live for about 100 years. People actually do not see an objective picture of reality due to the ignorance and the employment of their life.

Soul or astral body resides in the higher levels of cosmic consciousness, and it has no borders, no flowers, no labels and no barriers. It's free, small, clean, peaceful, elegant and beautiful. It moves in multiple Universes without any passport or visa or permit. It can build a house in any of the Universes, depending on its development. When the soul ends his karmic work, it leaves the body, and the body thus becomes useless. Body fused with 4 elements and recycled, but the soul continues its journey and depending on its karmic account or changes yourself and shown again or it is no longer a new Renaissance.

So we define our level of spirit and soul and then define that the number of rebirths allows us to determine the true purpose and mission of our current lifestyle. Living a life, it's hard to realize that each of us has certain program, founded in the period of our birth. We hardly do it and those who have been unable to determine her living life with benefit for ourselves and for the planet and for the entire universe.

Our worlds — internal and external — directly affect us and our soul, our mind. The man mind is very complex. If the man body dies, but information, called thought passes through genetic codes, gaining experience, and thus we continue to live with that gained weight. We have a few million years of history, millions of views and thoughts. All that we call "knowledge".

The reasons of all our problems or the many ailments are fears, ignorance, dogmatism, destructive thoughts. Each of us really has a mission and purpose, and we have the power to radically change many life events.

In the end, everyone finds their own answers to questions about its purpose. Someone, searching the life meaning and purpose of earthly existence come to God. The idea that there is a supreme, outside material world, who loves you, appreciates and guarantees the salvation of the soul, makes pacification to human life. Dive into religion helps to keep life guidance in the face of unrelenting stress and pressure by the circumstances. But does achieve oneness with God can be true goal in life?

There are other ways for self-realization. You can be a creator of your own life. And then people with head dipped in creativity. This often has to reveal the abilities and talents, tell the world about his or her identity. Creativity as a life goal increases the physical and mental longevity, brings the joy of daily existence and makes life real meaning. Often it does not matter in what area and at what level does individual create.

At some point the creative personality is beginning to realize that her destiny is inextricably linked to the future of mankind. And then all the daily chores, everyday care and material interests recede into the background. People begin to purposefully seek out the scope of their talents, which will give an opportunity to rediscover themselves and become useful for future generations. Henry Agranov Altshuler, one of the founders of the scientific theory of creativity, was sincerely convinced that give human life the true meaning can only worthy goal. It must meet several requirements: to be new, specific, substantial and have public interest.

Human life on Earth would be one-sided and flawed, if it was not a place for friendship, love, exciting adventures and social success. Of course, the creative life in no way cancels the simple joys of earthly life. And yet the creativity is one of the most powerful ways to find their purpose and put a point to the question of why human living on Earth. Point, which can well turn into an ellipsis that will takes in eternity.
